                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  - E16
                                                                                                                                                                                                                                                              - B01J-027/12 C07C-017/20 C07C-019/08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (CENG ) CENTRAL GLASS CO LTD
                                                               MeCHF2 (1) was prepd. by liq. phase reaction of MeCHCl2 (II) with HF at ordinary pressure and -10 degrees to 15 degrees in the presence of SbF5 (catalyst). In an example, 45g./hr. (II) and 1 mole/hr. anhyd. HF were mixed with 130 ml. anhyd. HF and 15.1g. SbF5 2 hr. at -5 degrees
and the mixt. left to react for 30 min. to give a prod. contg. (II) 3.2, MeCHClf 4.1, and (I) 85.1%.
                                                                                                                                                                                                                                                                                                        1974JP-0014074 19740205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hydrogen fluoride using antimony pentachloride catalyst
                                                                                                                                                                                                                                                                                                                                                                       19750822 DW1975-50 *
